

DESIGN AND TECHNOLOGY

Design and Technology encourages children to learn to think and intervene creatively to solve problems both as individuals and as members of a team.

Pupils develop practical skills in Design Technology by working with a variety of materials such as wood, clay, textiles and food. They will acquire knowledge of materials, mechanisms and structures and links will be made to the science curriculum in order to further their knowledge and understanding of Design and Technology.

Pupils are helped to apply this knowledge and develop skills in designing, making and evaluating their work through purposeful projects and outcomes.
